

HUSSAIN GADDAL

Android Developer

Riyadh, Saudi Arabia | +966 53 851 7374 | hussain.yg2010@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Android developer with 4+ years shipping production mobile apps. Built 10+ applications: 1 production launch (Maktabati), a cross-platform messaging app (Chirp), and 8+ personal and course projects. About a year hands-on with KMP/CMP and lightweight Ktor backends, including shipping to Desktop and iOS. Recently working with **Spring Boot** and PostgreSQL through coursework and side projects. Completed 8+ advanced tracks, including the Udacity Android Kotlin Nanodegree and JetBrains-collaborated courses on PL Coding. Comfortable with Bitrise CI/CD for automated build, test, and release pipelines.

SKILLS

Mobile & Desktop: Android SDK, Jetpack Compose, Kotlin
Multiplatform/Compose Multiplatform, Offline-First Architecture

Architecture: Clean Architecture, Multi-Module, MVVM, MVI

Tools & DevOps: Git, GitHub, Bitrise CI/CD, Postman, Gradle (Version Catalogs)

Backend: Spring Boot (Kotlin), Ktor, PostgreSQL, Redis

Languages: Kotlin (Expert), Java (Legacy)

Libraries: Koin, Hilt, Room, Retrofit, Coil, Coroutines & Flow

WORK EXPERIENCE

Android Developer — Kay Technology

Mar 2022 – Present | Riyadh, Saudi Arabia

- Took **full technical ownership** of the Android product. Led the migration from a legacy Java/XML codebase to Kotlin + Jetpack Compose (API 25+), cutting crash rates by **40%**.
- Built reusable internal SDKs and core modules for authentication, search, and download management, speeding up the team's delivery by **25%**.
- Designed UIs with Material 3 Compose, Coil, and Lottie animations, increasing user session duration by **15%**.
- Set architectural standards (Clean Architecture, MVI) and built a Bitrise CI/CD pipeline (JUnit, Espresso), cutting developer onboarding time by **50%**.
- Built and maintained lightweight Ktor micro-services for authentication and content delivery, improving API response times by **30%**.

Researcher — Kay Technology

Sep 2017 – Mar 2022 | Riyadh, Saudi Arabia

- Co-built **Kay Scanner**, a device that scans physical books without human page-flipping. Worked across hardware control, image capture, and software automation around the scan pipeline.
- Helped deliver **Kay Labs**, a 3D-printing lab partnered with Imam Muhammad bin Saud University (College of Computer & Information Sciences), equipped with Ultimaker hardware so students could prototype CS coursework projects.
- Hands-on with Fusion 360, Ultimaker hardware, and Cura slicing. The prototyping work led into mobile engineering at Kay Tech in 2022.

EDUCATION

Bachelor (Honors) of Electrical Engineering — Academy of Engineering Sciences

2011 – 2016

FEATURED PROJECTS

Maktabati | Kay Technology | Mar 2022 – Present

[View project →](#)

Full rebuild of the company's PDF viewer into a research library. Added digital library browsing, PDF viewing for 1000+ page documents, search, offline caching, sign-in, and resumable downloads.

[Kotlin](#) [Jetpack Compose](#) [Room](#) [Ktor](#)

Chirp | PL Coding | Nov – Dec 2025

[View project →](#)

Cross-platform messaging app (Android, iOS, Desktop) with 100% code sharing, offline-first sync via WebSockets, and secure auth.

[KMP](#) [CMP](#) [Koin](#) [Spring Boot](#) [WebSockets](#) [JWT](#) [PostgreSQL](#) [Room](#) [FCM](#)

Runique | PL Coding | Apr – Nov 2024
